EDUCATION

University of Minnesota, College of Science and Engineering

Bachelor of Science, Computer Science and Mathematics, Minor in Statistics

GPA: 3.9, Dean's List

Minneapolis, MN

Expected May, 2028

SKILLS

Programming Languages: Python, Java, Go, JavaScript, TypeScript, Bash, SQL

Tools & Platforms: Docker, Kubernetes, Helm, Jenkins, GitHub Actions, GitLab CI, ArgoCD, Terraform, Kafka, Redis, AWS, GCP, Gitleaks, Semgrep, Trivy, Grafana

RELEVANT EXPERIENCE

VietinBank

Hanoi, Vietnam

DevSecOps Engineering Intern

May 2026 - August 2026

- Built and maintained Jenkins and GitLab CI/CD pipelines across 4 services (Java, Go, Python, React) on a 9-VM Kubernetes environment, improving build, test, release automation, and deployment reliability.
- Integrated security quality gates and observability hooks into CI/CD workflows using Gitleaks, Semgrep, Trivy, SonarQube, Grafana, and Kubernetes monitoring, helping detect pipeline, deployment, and service-health risks before release.
- Reduced credential exposure by 80% using HashiCorp Vault and eliminated 100% plaintext service-to-service traffic with Istio mTLS and AuthorizationPolicy, improving deployment safety across internal microservices.
- Applied GitLab CI in real-life enterprise workflows by building reusable pipeline jobs across development, staging, and production-adjacent environments, supporting automated build, scan, and deployment stages.

FPT Software

Hanoi, Vietnam

Full-stack Engineering Intern

May 2025 - August 2025

- Built a full-stack company research platform (React/Vite, Node.js/Express, MongoDB) with JWT authentication, notes dashboard, and resume builder, deployed on Vercel and Render.
- Integrated a Python AI module via Node.js child processes for automated company analysis, reducing manual research lookup time by 60% for internal workflows.
- Designed a RESTful API with controller/model separation across 5+ endpoints, serving a responsive React frontend with dark/light mode and avatar/account management features.

PROJECT EXPERIENCE

MatchSense: Real-Time Football Analytics Platform, Independent Project

June 2026

- Architected a real-time event pipeline with 5 Go/Python microservices, Kafka, and Redis, running xG and win-probability ML models that update predictions within 30ms of each match event across 3 Kafka topics.
- Built full observability with Prometheus metrics, Loki centralized logging, and Jaeger distributed tracing propagated through Kafka message headers, with one trace ID spanning event-api, event-processor, and ml-predictor.
- Deployed via ArgoCD App of Apps (12 Applications) with 5 CI security gates (Gitleaks, Trivy, Cosign, SBOM, digest pinning) and 4 Kyverno admission policies, achieving 0 cluster credentials in CI across a monorepo pipeline.

Personal Cognitive Load & Focus Monitoring System, Independent Project

January 2026

- Built an end-to-end MLOps platform around a FastAPI cognitive-load prediction service with Prometheus metrics, OpenTelemetry tracing through Tempo, Loki logging, and Evidently data-drift monitoring.
- Automated testing, container delivery, and cloud deployment with GitHub Actions, 26 Pytest cases at 92% coverage, GHCR, Helm, GKE, Terraform, DVC, MLflow, and KServe scale-to-zero model serving.
